Claims 8-12, 15, 18-23 and 27 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 5.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1, 25 (as understood) and 28 are rejected under 35 U.S.C. 102(e) as being anticipated by Kato ('096).

Kato (particularly Figures 12 and 13) teaches all of the limitations of these claims including dampers (202), pressure regulator (90) and pressure sensor (107).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2, 7 and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kato ('096) in view of Kamiyama.

Kato applies as noted above and Kamiyama teaches the use of an elastic conduit just downstream of a fuel pump in order to dampen pressure fluctuations from the pump.

It would have been obvious to modify Kato by using a flexible tube downstream of the pump because Kato had already identified the need to dampen these fluctuations.

Claim 13, 14, 16 and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kato ('096) in view of Osakabe.

Kato applies as noted above and Osakabe teaches the need to mount engine sensors using vibration dampening mounts in order to protect these sensors, thereby making such a mounting means obvious to use in Kato in order to prevent sensor failure.

Claims 4, 6 and 25-26 are under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In particular, in claim 4, "said inner member" lacks antecedent basis in the claims and in Claim 25 "a fuel pressure sensor" communicates with "a fuel pressure sensor" which is not a clear limitation.

Claims 3 and 5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
